

May 20, 2009

Dear Pecora Customer:

As a result of this worldwide recession, there have been some extraordinary pressures on our wide-ranging procurement of certain raw materials and packaging supplies. As a manufacturer, we are increasingly seeing the results of significant imbalances in supply and demand of specific items. To keep our supply chain rolling, we are forced to uncover creative alternatives until reasonable balances and lead times are eventually achieved. In most cases these changes are insignificant and unrecognizable to the end user, and as a manufacturer, we look to keep them that way.

We have been advised by our nationally-recognized supplier of the inner pull-top canister which contains the activator for our Dynatrol-II and DynaFlex two-part urethane units that the lead time for this container has jumped overnight from 4 days to 6 weeks. As a result, we will be temporarily utilizing an inner plastic cup for our Dynatrol-II and DynaFlex activators during this time. These are the same cups we have always utilized with our Dynatred product.

The cups will be labeled with the appropriate safety and use information. Please note that they do require a screwdriver or "church key" in order to break its seal. Nothing with the product has changed. When the traditional canisters become available again, hopefully next month, we will switch back.

We wanted to advise you of this temporary situation in order to minimize any inconveniences. We appreciate your understanding during these extraordinary times. Feel free to contact me should you have any comments or questions.

Best regards,

John Stubblefield
Director of Marketing
Pecora Corporation
