

Acoustical Properties of BA-98 Non-Skinning Butyl Sealant

Technical Bulletin PEC 97

BA-98 is an acoustically rated sealant which complies with ASTM E-90-90 when applied in accordance with ASTM C 919 (Use of Sealant in Acoustical Applications).

The STC (Sound Transmission Classification) values produced when testing BA-98 resulted in a sound transmission reduction of 10 decibels in a 1.5 square inch opening in a 100 square foot partition.

When sealing partition wall voids and through openings, Pecora BA-98 will ensure retention of the original STC rating designed into the wall unit.
